INTRODUCTION

1st Month : Stabilization

2nd Month : Differentiation

3rd Month : Complexity

4th Month : Circulation

5th Month : Muscle & Bulk

6th Month : Cognition & Fluid
Balance

7th Month : Completeness

8th Month : Stabilization

9th Month : Final Transition

Monthly Regimen & It's Scientific Evaluation

- तत्र प्रथमे मासे गर्भिणी क्षीरमनुपस्कृतं पिबेत् काले काले यथासात्म्यम् ॥
- द्वितीये मासे क्षीरमेव च मधुरौषधसिद्धम् ॥
- तृतीये मासे क्षीरं मधुसर्पिभ्यामुपसृज्य ॥

First trimester is the period of Organogenesis.

- **Milk:** Provides essential **amino acids** and **calcium**. It is Sheeta Virya ; prevents early **uterine irritability** and bleeding
 - **Madhura Drugs:** Act as **antioxidants** and free-radical scavengers during rapid cell **differentiation**.
 - **Honey & Ghrita** : The combination provides a wide **nutritional** spectrum. Ghrita, being a lipid, is essential for the development of the **fetal brain** and **cellular membranes**.
- 

- चतुर्थे मासे क्षीरनवनीतमक्षमात्रमशनीयात् ॥
- पञ्चमे मासे क्षीरसर्पिः ॥
- षष्ठे मासे क्षीरसर्पिर्मधुरौषधसिद्धम् ॥

Second Trimester: The Phase of Rapid Growth

- **Ksheera Navaneeta** : To nourish the **Dauhridini**. It provides fat-soluble vitamins necessary for the developing circulatory system and bone mineralization.
- **Ksheera-Sarpi** : For **Mamsa-Rakta** formation. Being high-calorie fuel, ensuring that the mother's energy levels do not deplete while her body builds fetal tissues.
- **Madhura-Siddha Ghrita** : To enhance **Buddhi** & prevent **Shopha** .
Gokshura : Acts as a mild diuretic. Gokshura regulates maternal **fluid balance** and protects **renal function**.

- सप्तमे मासेऽपि पूर्ववदेव ॥
- अष्टमे मासे क्षीरयवागू सर्पिष्मतीं पिबेत् ॥
- ततः परं नवमे मासे अनुवासनबस्तिं
दद्यान्मधुरौषधसिद्धेन तैलेन ।
तेनैव चैनं तैलेन योनिपिचुं च नित्यशः कुर्यात् ॥

Third Trimester: The Phase of Preparation

- Ksheera Yavagu : **Ksheera** : Acts as a Jeevaniya and stabilizes the fluctuating Ojas.

Yavagu : It is Laghu and Vatanulomana

Ghrita: Provides the essential fatty acids required for the final stages of fetal brain maturation.

- **Anuvasana Basti & Yoni Pichu** : To soften the birth canal.

Oils are absorbed through the rectal mucosa, helping in the relaxation of pelvic ligaments.

Pichu Modifies the vaginal flora and increases the elasticity of the perineal muscles for sukhprasava

Conclusion

- **Sneha, ksheera & Madhura** dravyas acts as metabolic vehicles that are fat soluble and cross placental barriers
- The use of Basti (Enema) in the 8th and 9th months targets the **Enteric Nervous System** reducing the incidence of **Dystocia** (difficult labor)
- Sushruta's inclusion of Gokshura (*Tribulus terrestris*) in the 6th month is a calculated pharmacological intervention to maintain **Glomerular Filtration Rate (GFR)** & PIH
